How it Works

Improving Oil One Fraction at a Time

The Fraction Finder has been used by distillers to process the purest product possible. How? Its innovative software can track cannabinoid as it flows through distillation glassware. This monitoring lets you track relative potency and wanted and unwanted substances. All this to help make pure, safe oil for users

our White Paper

Key Benefits

Improve Distillation Control

A Strong Protection of Cannabis Oil

- Contamination reduction
- Process Traceability and Consistency
- Guesswork Elimination

A More Profitable Production

- Greater Quality
- Purity Improvement
- Higher Market Value

A Data-Driven Process Control

- Indication of Relative Potency
- Fraction Identification and Reporting
- Greater Repeatability and Techniques

Our Story

Scientists Helping Scientists
Distill Purer Oil Product

- 1 One day, members of a product company and research company discussed the cannabis community's purity concern.
- 2 They saw the opportunity to solve the problem at its root: distillation.
- 3 Soon after, they formed Arometrix, a collective of scientists and engineers
- 4 They researched and tested technology for months and months, listening to community feedback
- 5 Eventually, they built a first-of-its-kind cannabis oil monitor, the Fraction Finder

@arometrix

DON'T JUST DO YOUR PROCESS. KNOW YOUR PROCESS.

Distillate-based medications bring relief to patients with serious illnesses, such as PTSD, anorexia, and epilepsy. It's vital to treat the distillation process with proper methods so that these patients can receive uncontaminated products.

Before the Fraction Finder, our customers had no clear way to monitor their distillation in real-time. Instead, they relied on judgement, eyesight, experience, and outside lab results to determine potency after the fact.
