

FRACTION FINDER

FOR WIPE FILM EVAPORATION

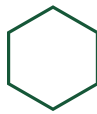

FRACTION FINDER

DISTILLATION PROCESS
MONITORING SYSTEM

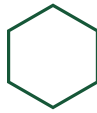

MONITOR EACH LINE OF A WFE UNIT

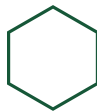

REAL-TIME MOLECULE INDICATION

- Detect D9, Chlorophyll, Lipids, and more in real-time
- Observe for oddities in either line at the point of collection

IN-LINE MONITORING

- Ensures separation of terpenes during terp stripping pass
- Ensure that Delta-9 is present in the distillate line during the D9 refining pass
- Ensure that contaminants, and minimal amount of Delta-9, are in the residue line

PROCESS PARAMETER FEEDBACK

- Validate that you are operating at the optimal parameters
- Tune process parameters, such as flow rate and temperature
